Testimonial - Hospital Information System from Avanttec
Medical Systems (P) Ltd.

We are using Avanttec's Hospital Information System in our hospital since 2016. It is very user friendly and our staff adapt to the software in a very short period.

The software consists of all Billing and POS modules. The interfacing modules such as Bar Coding and Tally are the best of the software. The bar coding interface in Pharmacy eases the dispensing of medicines and the billing also made effectively with correct Batch Number, Expiry Date and all other relevant particulars. The Tally Accounting software interface is also of great help to the accounts department as the entry of Purchase, Sales, Income and Expenditure happens with just few clicks. Both these interfaces avoid duplication of work and manual errors.

After sales service of Avanttec is very much satisfactory. We are happy to recommend Avanttec HIS to other hospitals.
